

You can rent a yacht to enjoy the views of the Black Sea. You can take the cable car up to 2320 meters above sea level to admire the picturesque Caucasus Mountains. The concierges of the resort city of Sochi have an offer that will appeal to bold people who are looking for new experiences. Now in Sochi, the city with the only one in Russia high-altitude adventure and bungee jumping park AJ Hackett Skypark, you can take a tandem parachute jump from an height of 4000 meters which will allow you to look at the beauties of nature from a completely new perspective!

The jump itself takes about 2 hours, but it is better to allocate more time, because the exciting adventure depends on favorable weather conditions. There are a few mandatory rules you have to follow – you must take your passport with you, as well as wear a comfortable pair of shoes with strong lacing. You can jump in tandem from the age of 14 (up to 17 years - with the written consent of the parents and in their presence) and with weighing up to 100 kg. Medical contraindications include: serious disorders of the musculoskeletal system; shoulder dislocations; recent surgery; diseases of the nervous and cardiovascular systems; epilepsy; the presence of a pacemaker; pregnancy.

Listen carefully to the briefing, put on your branded long sleeve and now you are ready to leave for the airport. There are the usual pre-flight formalities and the same check-in procedure for the flight, as if you were flying to any other city in the world. You will receive a ticket for a special flight, which you can keep as a souvenir.

An-28 is already waiting for your group on the runway. You step into the cockpit, landing gear off the ground, the plane begins to climb. Fortunately, all this time your instructor is nearby, cheering and joking, because you are alternately overwhelmed by fear, excitement and adrenaline. After 20 minutes, the team begins to busily adjust the equipment, and you understand that the time has come. When the door to the sky will open, your heart will miss two or three beats guarantee. The next minute you are standing on the edge of the board, there is emptiness in front of you, and the instructor is counting down irreversibly. On the count of THREE, your life will be divided into “before” and “after”.

Free flight from a height of 4000 meters lasts 60 seconds. The whistling of the wind in your ears, the sound of your own breathing, the cold wind waters your eyes even under protective goggles, it takes your breath away from the indescribable beauty around.

A sense of security and a soft landing are guaranteed because you will have an experienced instructor with you. The main rule is to listen to the instructor in details. While still on the ground, you will most likely talk to your instructors and ask how many jumps they have done in their

lives. Surely you will feel calmer when your instructor says that he has skydived at least 1600 times, and there are professionals in the team who have made more than 11,000 jumps. It is still difficult for me to comprehend the enormity of this figure. Also the parachute equipment of the world's top manufacturers Sigma UPT is used in the work. Remind yourself that aircraft undergo annual airworthiness certification. With data like this you will definitely feel more calm. If you listen carefully and strictly follow the rules, the instructor will allow you to control the canopy when approaching the ground at a safe distance.

The mountain peaks that are so close that it seems you can touch them with your stretched arm, the pacifying brilliance of the sea, the greenery of untouched forests spreading to the horizon, the nimble silvery snake of the river under your feet, will be imprinted in your memory for the very long time..
